

A Dreamy Atmosphere IN CHINA

Located in the region of Guangzhou, the Hengda Hotel is one of the most luxurious resorts in the world and is illuminated with Coemar's dazzling lights.

Creating atmosphere with lights... Coemar's been doing just that since 1933, and with great skill too. The Castel Goffredo firm has always managed to thrill the public with its lighting for the world's biggest spectacles. Today, its lights are also used in architectural settings. And the people who choose them are the most important international lighting designers, called in to make the most fabulous resorts really unique.

The Hengda Hotel is a magnificent five-star platinum structure, and was recently opened in the region of Guangzhou in southeast China. Its 'already spectacular' appearance becomes even more stunning in the evening, when the Coemar moving heads are switched on.

The entire external lighting project, designed by the lighting company, Guangzhou Zhiliang, is highly innovative as the project involves the use of moving heads, which are usually found in the theatre.

Shining Light Beams Towards the Sky

Walking through the gardens and along the paths of the huge park during the evening, your eyes are drawn to the incredible light beams lighting up the sky; the Infinity S model ACL fixtures, extremely powerful and dazzling, can produce adjustable beams of 1.7° to 6°. The design includes 63 of them, some of which are located in the upper part of the building in order to create light beams towards the sky. Others have been positioned along two sides of the garden, to light up the darker areas and fill them with colour.

The small moving head of the Infinity S range have been combined with the larger Infinity Spot XL ones - moving heads that emit an exceptional lighting power, due to optimal use of the 1500 W source, controlled by an exclusive zoom range from 8° to 49° and the mechanical and electronic precision dimmer. Together, they transform every shadow of the building into something unique.

The Infinity Spot XL fixtures at the entrance produce a real metamorphosis of the environment, using the colours of the sea to almost create a seabed. Thanks to the remarkable CMY colour mix system and the extraordinary variety of aerial effects, break-ups, rotating prisms and gobos, the statues in the vast imperial park come to life and start dancing.

The use of entertainment lighting in the architectural field makes everything more sparkling. The combination of the Infinity ACL S and Infinity Spot XL is a marriage made in heaven. And thanks to the Coemar lights, the Hengda Hotel becomes even more glamorous and exciting.
