Telenorba Updates Lighting Rig with Coemar Fixtures

CONVERSANO, Italy — Telenorba, a TV, cinema and multimedia production company, updated its lighting inventory recently with an eye toward energy efficiency, and chose Coemar fixtures, including some of the company's LED fixtures.

Telenorba now can deploy 24 StageLite LED SC and 20 StageLite LED Sc devices with 50° optics. The latter can be used for effects created by the LED source, which can be divided into three lines, each independently directed for symmetric or asymmetric beam effects.

Ten RazorLite LED devices, each with of 36 LEDs, combine RGB color mixing and elliptical optics, and newscasters are lit with 10 ParLite LED Natural White 4000K devices, 10 Wash LEDs and five PinLite LEDs.

For more information, please visit www.coemar.com.
