Infinity Spot S

instruction manual
manuale di istruzioni
Please note in the space provided above the relative service information of the model and the retailer from whom you purchased your Infinity Spot S: this information will assist us in providing spare parts, repairs or in answering any technical enquiries with the utmost speed and accuracy.

Prendete nota, nello spazio apposito, dei dati relativi al modello e al rivenditore del vostro Infinity Spot S: questi dati ci permetteranno di assistervi con la massima rapidità e precisione.

**WARNING**: the security of the fixture is granted only if these instructions are strictly followed; therefore it is absolutely necessary to keep this manual.

**ATTENZIONE**: la sicurezza dell’apparecchio è garantita solo con l’uso appropriato delle presenti istruzioni, pertanto è necessario conservarle.

English

Congratulations on having purchased a Coemar product. You can be assured that you have a fixture of the highest quality, both in componentry and in the technology used. We renew our invitation to you to complete the service information on the previous page, to expedite any request for service information or spares (in case of problems encountered either during or after installation). This information will assist in providing prompt and accurate advice from your Coemar service centre.

Following the instructions and procedures outlined in this manual will ensure the maximum efficiency of this product for years to come.

1. Packaging and transportation

1.1. Packaging
Open the packaging and ensure that no part of the equipment has suffered damage in transit. In case of damage to the equipment, contact your carrier immediately by telephone or fax, following this with formal notification in writing.

Packing list
Ensure the packaging contains:
1. Infinity Spot S
2. Instruction manual
3. Cam-lock support brackets

1.2. Transportation
The Infinity Spot S should be transported in its original packaging or in an appropriate flight case.

2. General information

2.1. Important safety information

Fire prevention:
1. Infinity Spot S utilises a Philips MSR GOLD 300 FastFit; the use of any alternative lamp is not recommended and will null and void the warranty of the fixture.
2. Never locate the fixture on any flammable surface.
3. Minimum distance from flammable materials: 0.5 m.
4. Minimum distance from the closest illuminable surface: 2 m.
5. Replace any blown or damaged fuses only with those of identical values. Refer to the schematic diagram if there is any doubt.
6. Connect the projector to mains power via a thermal magnetic circuit breaker.

Preventing electric shock:
1. High voltage is present in the internals of the unit. Isolate the projector from mains supply prior to performing any function which involves touching the internals of the unit, including lamp replacement.
2. For mains connection, adhere strictly to the guidelines outlined in this manual.
3. The level of technology inherent in the Infinity Spot S requires the use of specialised personnel for all service applications; refer all work to your authorised Coemar service centre.
4. A good earth connection is essential for proper functioning of the projector. Never operate the unit without proper earth connection.
5. Mains cables should not come into contact with other cables.
6. Do not operate the projector with wet hands or in an area where water present.
7. The fixture should never be located in an exposed position, or in areas of extreme humidity. A steady supply of circulating air is essential.

Protection against ultraviolet radiation:
1. Never turn on the lamp if any of the lenses, filters, or the carbon fibre housing is damaged; their respective functions will only operate efficiently if they are in perfect working order.
2. Never look directly into the lamp when it is operating.

Safety:
1. The projector should always be installed with bolts, clamps, and other fixings which are suitably rated to support the weight of the unit.
2. Always use a secondary safety chain of a suitable rating to sustain the weight of the unit in case of the failure of the primary fixing point.
3. The external surface of the unit, at various points, may exceed 150°C. Never handle the unit until at least 10 minutes have elapsed since the lamp was turned off.
4. Always replace the lamp if any physical damage is evident.
5. Never install the fixture in an enclosed area lacking sufficient air flow; the ambient temperature should not exceed 35°C.
6. Wait at least 10 minutes after the unit has been turned off prior to attempting to replace the lamp. Always use gloves while replacing the lamp.
7. The projector contains electronic and electrical components which should under no circumstances be exposed to contact with water, oil or any other liquid. Failure to do so will compromise the proper functioning of the projector.

Articulated movement
The projector has a pan range of 540° in its base and a tilt range 262° in its yoke; do not obstruct the projector whilst it is undertaking articulated movement.

Forced ventilation
You will note several air vents on the body of the projector. To avoid any problems associated with overheating, never obstruct any of these vents as this may seriously compromise the proper operation of the unit.
Protection rating against penetration by external agents:
The fixture is classified ordinary apparatus; its protection grade against penetration by external agents, solid or liquid, is IP 20.

2.2. Warranty conditions

1. The fixture is guaranteed for a period of 12 months from the date of purchase against manufacturing or materials defects.
2. The warranty does not extend to damage caused by inappropriate usage or use by inexperienced operators.
3. The warranty is immediately void if the projector has been operated or dismantled by unauthorised personnel.
4. The warranty does not extend to fixture replacement.
5. The serial number of the projector is required for any advice or service from your authorised Coemar service centre.

2.3. CE norms

The projector meets or exceeds all applicable CE requirements.

3. Product specifications

3.1 Technical characteristics

**Power:** 90-260 Vac 50/60Hz Autosensing  
**Maximum current:** 2 A@ 230 V – 4.4 A@ 115 V  
**Power factor:** cos φ = 0.9  
**Lamp wattage:** 300 W  
**Maximum ambient temperature:** 35°C / 95°F  
**Weight:** 55.11 lbs.  
**IP rating:** IP 20

3.2 Dimensions
4. Installation

4.1 Mechanical installation

**Infinity Spot S** may be either floor or ceiling mounted. For floor mounting, the unit is provided with four rubber feet mounted on the its base allowing its top to be placed on a level surface.

For ceiling mounted installations, **Coemar** includes two cam-lock support brackets. The cam-lock brackets are affixed via a 1/4 nut. Before using them for supporting the projector, ensure that they are correctly seated and firmly tightened into position. Optional brackets, common to other Coemar products are available as spare parts (CO9109).

</tbody>
</table>
For ceiling mounted installations we suggest the use of appropriate clamps or fixings to attach the fixture to the mounting surface. Clamps may be attached to the central hole provided in the cam-lock brackets, as shown in the following diagram.

4.2 Safety connections

If the Infinity Spot S is fixed to a structure, the use of a safety chain is recommended in order to meet the relevant safety standards. The safety chain should pass through the holes “E” located in the base of the fixture itself.

4.2.1 If using a safety chains or steel cables which have not been manufactured by Coemar, ensure that they are suitable for holding the weight of the unit.

5. Powering up

5.1 Mains cable characteristics

The mains cable provided is thermally resistant, complying to the most recent international standards. It meets or exceeds VDE and IEC norms, IEC 331, IEC 332 3C, CEI 20 35.

NB: In case of cable replacement, similar cable with comparable thermal resistant qualities must be used exclusively (cable 3x1.5 ø external 10 mm, rated 300/500V, tested to 2KV, operating temperature -40° +180°, Coemar cod. CV5309).

Connecting to mains power

For connection purposes, ensure your plug is of a suitable rating to sustain the maximum current:

- 200/208/230/240 VAC 4.5 amps constant current in normal operation

Locate the mains cable which exits the base of the unit and connect as shown below:
10

6. Control signal connection

Control signal is digital and is transmitted via two pair screened Ø0.5mm cable as per international standards for the transmission of DMX512 data. Connection is serial, utilising XLR3 and XLR5, male and female sockets located on the base of the Infinity Spot S, labeled DMX 512 IN and OUT (see diagram).

Plug/socket connections for XLR3 and XLR5 connectors:

Pin connections conform to the international standard as per the following table:

<table>
<thead>
<tr>
<th>Pin</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>GROUND</td>
</tr>
<tr>
<td>2</td>
<td>DATA -</td>
</tr>
<tr>
<td>3</td>
<td>DATA +</td>
</tr>
<tr>
<td>4</td>
<td>NC</td>
</tr>
<tr>
<td>5</td>
<td>NC</td>
</tr>
</tbody>
</table>

When signal arrives from a DMX512 console with Cannon XLR (5 poles), pin 4 and pin 5 do not have to be connected.

6.1 Connecting through ArtNet protocol.

ArtNet protocol allows to all the suitable fixtures to behave as a network device such as a normal PC is seen in a network.

Infinity S is ready, as it is, to be included in a ArtNet network without the need for further settings. It just needs to connect the RJ45 connector (found on the panel near DMX connectors) to a generic Ethernet HUB by using a RJ45 patch. The HUB itself, must be connected to an ArtNet controller. Each Coemar Fixture has its own IP address, so it's not needed to set it in order to include one fixture in your network. Anyway, Coemar fixtures allow to set custom addressing if exist particular network needs, In order to customise the IP address, follow this menu path: MAIN FUNCTION/PROJECTOR CONTROL MODE/ARTNET ONLY (or ARTNET TO DMX) /CUSTOM IP ADDRESS (see complete menu at chapter 8.3 ).
7. Turning on the projector

After having followed the preceding steps, turn on the projector via the main power switch. The display will show in sequence the software version installed on the onboard microprocessors. For example, upon turning on power, the Infinity Spot S may show:

![Infinity Spot S display](image)

Software version currently installed on the electronic boards of the fixture.

The projector will perform a reset function on all the internal and external motors. This will last only few seconds, after which it will be subject to the external signal from the controller. The display will remain fixed indicating the correct DMX 512 signal reception.

![Reset and DMX Address](image)

During the reset, the display will blink for few seconds... ...then the DMX address of the fixture will appear.

If the display is flashing and the “NO DMX SIGNAL” appears, it means that the DMX signal is not received. Check your cabling and your controller.

7.1 DMX addressing

Each projector utilises 22 channels of DMX 512 for complete operation (for further information, see section 7.2. DMX functions).

**DMX addresses**

When powered up initially, each projector will show A001 which indicates DMX address 001: a projector thus addressed will respond to commands on channel 1 to 22 from your DMX controller. A second unit should be addressed for example as A023 and so on until the final projector has been addressed. The operation must be carried out on every Infinity S that has an address different to A001.

**Altering DMX addresses**

1. Press the + or - buttons until the display shows the required DMX address. The characters in the display will flash to indicate that the selection is not yet stored in memory.
2. Press the enter button to confirm your selection. The display panel will cease to flash and the projector will now respond to the new DMX 512 address.

![DMX Address A001](image)

Important Note: holding down the + or - buttons will cause the display to alter at an increased speed, allowing a faster selection to be made.

**WARNING !**

If you alter the DMX with no DMX controller connected, the characters in the display panel will continue to flash even after you have pressed ENTER button.
## 7.2 DMX functions

### Note: factory default setting is 16 bit / 24 channels

8. Display panel functions

The display panel of the Infinity Spot S shows all the functions available; it is possible to change some of those parameters and to add some functions. Changing the preset settings made by Coemar can vary the functions of the device so that it may respond in different ways depending on the controller, therefore carefully follow the instructions before carrying out any possible selection.

8.1 Quick guide to menu

In order to access to the functions, just push the menu button: a screen divided into four sections will appear; the sections will highlight cyclically one by one every time a + or - button is pushed. To select the desired function, press enter.

The following diagram shows the content of every section.

8.2 Rapid scrolling

Via the Infinity Spot S display it is possible to rapidly scroll through the various numbers displayed in the menu in the following manner:
1. Pressing the + or - buttons will cause the number to scroll more quickly.
2. Pressing and holding the + button and then the - button will cause the numbers to jump to the highest value.
3. Pressing and holding the - button and then the + button will cause the numbers to jump to the lowest value.
8.3. Main functions
This section gives the opportunity to change and customize some functional settings of the fixture.

**MAIN FUNCTIONS**

- **PAN/TILT**
  - It allows the complete management of the horizontal and vertical movements.
  - See diagram in the next page.

- **CMY SETTINGS**
  - **STANDARD**
  - **SPECIAL**
  - It allows to choose an alternative colour insertion curve.

- **GOBOS**
  - **RESOLUTION**
    - 8 bit
    - 16 bit
  - It allows to choose the gobo's working resolution. (please, see DMX chart).

- **IRIS**
  - **LINEAR**
  - **PULSE**
  - Enables or disables the iris pulse effect. (please, see DMX chart).

- **FANS MODE CONTROL**
  - **NORMAL**
  - **HIGH**
  - In NORMAL position the control of the fans is made by pcb in function of internal temperature, in HIGH position the fans are always at full power.

- **LAMP STRIKE DMX**
  - **ON**
  - **STANDARD**
  - **ALL**
  - **PAN/TILT ONLY**
  - **EFFECT ONLY**
  - It performs the reset function of the fixture.
  - Pressing ENTER and MENU buttons when reset starts, It will access SPECIAL MODE (see it at pag. 19).

- **RESET**
  - **SURE ?**
  - Restores all functional settings (excepts for address, motors, tuning and odometers) to default values.

- **RECALL DEFAULT SETTINGS**
  - **SURE ?**

- **ZAP EFFECT ENABLE**
  - **ON**
  - **OFF**
  - Enables or disables the lamp's "zap effect".

- **ID CODE**
  - **from 1 to n°**
  - Lets you set the ID code of the fixture by using + or - buttons.

- **TEST MOTORS**
  - It allows to move and check every single motor without using DMX signal.
  - SAVE ALL allows to store the motors position until next fixture's start.

- **PROJECTOR CONTROL MODE**
  - It allows to set the fixture's control mode (please, see ARTNET functions chapter).

**DMX ONLY**

**ARTNET ONLY**

- Default IP address
- CustomIP address
- Universeaddres
- MAC address

**ARTNET TO DMX**

- Default IP address
- CustomIP address
- Universeaddres
- MAC address

**PAN**

**TILT**

**DIMMER**

**SHUTTER**

**IRIS**

**FOCUS**

**GOBO WHEEL 1**

**GOBO WHEEL 2**

**GOBO ROTATION 1**

**PRISM WHEEL**

**PRISM ROTATION**

**COLOR WHEEL**

**CYAN**

**MAGENTA**

**YELLOW**

**ZAP EFFECT**

**SAVE ALL**
The following diagram explains the sub menu for the management of pan and tilt, regarding the pan/tilt menu item described in the diagram at previous page.

- **PAN/TILT**
  - **PAN/TILT**
  - **CMY SETTINGS**
  - **GOBOS**
  - **IRIS**
  - **FANS MODE CONTROL**
  - **LAMP STRIKE DMX**
  - **RESET**
  - **RECALL DEFAULT SETTINGS**
  - **ZAP EFFECT ENABLE**
  - **ID CODE**
  - **TEST MOTORS**
  - **PROJECTOR CONTROL MODE**

- **PAN DIRECTION**
  - **CLOCKWISE**
  - **COUNTERCLOCKWISE**
  - Inverts the horizontal beam direction, from left to right or vice-versa by the same DMX change.

- **PAN ANGLE**
  - **-540°**
  - **-400°**
  - Panoramic working mode that reduces rotating angle from 540° to 400°.

- **TILT DIRECTION**
  - **CLOCKWISE**
  - **COUNTERCLOCKWISE**
  - Inverts the vertical moving beam direction, from upwards to downwards or vice-versa by the same DMX level change.

- **OPTO ENCODER ENABLE**
  - **PAN/TILT**
  - **ON**
  - **OFF**
  - Allows to enable or disable the optical sensors which check the base's or the yoke's position (or body) and perform the automatic return if moved accidentally.
  - **PAN ONLY**
  - **ON**
  - **OFF**
  - **TILT ONLY**
  - **ON**
  - **OFF**

- **PAN/TILT MOVEMENT ENABLE**
  - **PAN/TILT**
  - **ON**
  - **OFF**
  - Allows to engage or disengage the pan, or the tilt or both movements. It allows to start the fixture into a case or installed on a truss.
  - **PAN ONLY**
  - **ON**
  - **OFF**
  - **TILT ONLY**
  - **ON**
  - **OFF**
8.4 Measures

The internal microprocessor of the **Infinity Spot S** allows for several diagnostic and output parameters to be displayed.

**MEASURES**

- **TEMPERATURE**
  - It shows the temperatures in the base of the fixture.

- **VOLTAGE**
  - Measures main power voltage of the fans; values over 28.5V must be considered as abnormal.

- **DMX INPUT MEASURE**
  - Measures the DMX value (0-255) received from each channel used by the fixture on the DMX 512 line.

- **DMX RATE**
  - Reading of the typical value of the DMX signal called "rate". (signal update frequency in milliseconds).

- **ALARM STATUS**
  - It shows possible alarm messages.

- **LAMP STATUS**
  - It shows lamp’s status: on or with "zap effect" enabled.

- **USAGE HOURS**
  - It shows fixture’s odometers:
    - LAMP LIFE (r) = resettable lamp life.
    - LAMP LIFE = total life of all lamps used (not resettable).
    - UNIT LIFE = fixture’s life.

- **SOFTWARE VERSION**
  - It shows the actual installed software version. (this info is available also during fixture startup).
8.5 Display setup
The Display setup allows to tune the Infinity Spot S functions according to your needs. The following diagram shows the section features.

8.6 Demo mode
Demo mode allows the fixture to perform up to 4 different demonstration programs Infinity Spot S.
# 8.7 Special mode and electronic motor adjustment

**WARNING!**
This section is reserved for the exclusive use of qualified and experienced technical personnel.

“SPECIAL MODE” menu allows the access to the motor adjustment section and to special functions like lamp odometer reset, software upload and download. To enter “SPECIAL MODE” reach the reset page in the “MAIN FUNCTIONS” menu, start reset choosing “ALL” and press simultaneously enter and menu button for about 10 second nearly while the reset is being completed.

**WARNING!**
The electronic tuning procedure is only actuable with DMX512 signal present.

The display panel of the Infinity Spot S allows for the electronic alignment of the projector motors in the optical system. This procedure is performed by Coemar at the factory. It may be useful to perform this procedure in order to obtain particular effects or in the case of internal components being replaced.

Altering the factory settings may radically alter the functioning of the projector. Carefully read all of the following prior to attempting any changes.

Note: pressing the buttons + and - simultaneously the setting returns to 128 (default).

It stores the settings and exits.

It restores to 0 the resettable lamp's electronic odometer visible also in MEASURES menu. It must be restored each time the lamp being changed in order to get a correct reading of lamp's life.

It makes the fixture ready to transfer the LCD software on to the PC.

It makes the fixture ready to transfer the MOTORS software on to the PC.

It makes the fixture ready to receive the LCD software from the PC.

It makes the fixture ready to receive the MOTORS software from the PC.
9. lamp installation and alignment

Infinity S can mount three types of 300 W Metal Halide Discharge lamp with PGJX28 base lamps. The use power is 300W. These lamps are available as spare parts at your Coemar’s distributor or service center.

</tr>
</tbody>
</table>

**WARNING !**

Disconnect the unit from main power prior to attempting lamp’s installation or replacement. Make sure that the unit is cooled sufficiently.

The unit’s internal temperature can reach 250°C after 5 minutes, with a maximum peak of 350°C; ensure that the lamp is cold prior to attempting its removal: the fixture should be allowed to stand and cool for at least 10 minutes. The metal halide lamps used in this product contains mercury vapor and must be handled very carefully. The lamp operates at high internal pressure so, exists the risk of its explosion if used beyond its recommended life. We recommend, therefore, to replace the lamps within the life span declared by the manufacturer.

9.1 Lamp installation

1. Use a suitable screwdriver to loosen the four screw marked “A” which fix the lamp cover at the rear of the projector.
2. Remove the lamp holder cover marked “B”.
3. Identify the lamp holder “C” and insert the lamp correctly.
4. Insert the lamp and gently rotate it clockwise until it locks without force. Do not use undue force if the lamp refuses to lock. The lamp is made of quartz glass and should be handled with care; always adhere to the instructions supplied in the lamp's packaging. Never touch the glass with bare hands but use the tissue provided in the lamp's packaging or gloves.
5. Replace the lamp holder cover in its original position and fix the screws back in.

**WARNING !**

- Never use undue force where the procedure appears difficult.
- Never put pressure on the glass of the lamp.
- Never touch the glass of the lamp with bare hands.
9.2 Aligning the lamp in the optical path.

Aligning the lamp in the optical system is achieved via the 3 adjusters at the rear of the projector. This procedure should be undertaken to maximise output, to avoid the possible overheating of the internal components due to the incorrect focusing of the beam onto components not predisposed to high temperature. It is extremely important to obtain a uniform distribution of light on all beams.

Alignment procedure
Alignment is carried out by using the 3 screws A, B and C showed in the picture below. The lamp should be on, black-out and dimmer fully open, and no colours selected. If the lamp is not correctly aligned, a hot-spot will be readily noticeable. Using the 3 adjusters in unison, you will need to bring the hot-spot to the most central part of the beam possible and then flatten the beam to maximum uniformity. The combined regulation of the three adjusters allows horizontal, vertical and axial regulation of the lamp.

10. Operating on inside groups

Infinity Spot S allows extraction of both gobos and colour changer assemblies in order to facilitate inspection, gobos replacing and cleaning of coloured filters and lens.

WARNING!
The following procedures should be undertaken by qualified and experience technical personnel. Always disconnect all cables before proceeding and ensure that the unit is sufficiently cool.

10.1 How to open the projector.
Using an appropriate screwdriver, remove the screws “A” which fix the housings and remove it. To identify which part of the projector must be removed, position the unit so that the labels of the lamp holder group can be read and are in the upright position. Now lock the unit by the locking device and remove the upper cover.
10.2 How to extract the gobos assembly.
1. Remove “B” screws on the connector labelled “GOBOS” and gently remove the “C” connector.
2. Remove fixing screws of the gobos assembly and gently take it out. If the assembly refuses to exit, do not force it but rotate manually the gobo wheel until the assembly is free to exit.

10.3 Standard gobos wheel configuration.
10.4 How to replace gobos:
1. Lift and gently extract the support which contains the gobo you are going to replace from the gobos wheel.
2. Remove the spring that fixes the gobo to the support.
3. Insert the new gobo respecting the coated side. Locate the reference point on the gear and use it to orient the gobo and fix on to the projector.
4. Mount the spring.
5. Mount the support on the wheel with the reference point looking outwards (see picture).
6. Check the gobos freely rotate and mount the gobos assembly in the fixture following backwards the procedure explained in the previous section.
The gobos wheel only accepts gobos with the following features:
External diameter 27 mm.
Working area diameter 21 mm.
Thickness: metal gobos from 0.2 to 0.5 mm, glass gobos up to 4 mm

10.5 Standard fixed gobos wheel configuration.
10.7 How to extract the colour assembly.

<table>
<thead>
<tr>
<th>WARNING!</th>
</tr>
</thead>
<tbody>
<tr>
<td>If it has not been done before, extract the gobos assembly now or it will not be possible to proceed otherwise; refer to previous section</td>
</tr>
</tbody>
</table>

1. Remove “D” screws on the connector labelled “COLOUR CHANGER” and gently remove the “E” connector.
2. Remove the fixed screws of the colour changer assembly and gently extract it. Now it is possible to inspect, clean and replace the filters.
10.8 Standard color wheel configuration

![Color wheel configuration diagram]

10.9 How to replace filters

1. Facing the front side of the colour wheel, gently hold the filter you want to replace with thumb and finger, then put a little pressure down and extract the filter.

2. Insert the new filter making it slip under the spring until it locks; respect the coated side of the filter which must be placed on the part where the spring is.

The wheel only accepts glass filters or gobos with a maximum diameter of 40 mm and thickness of no more than 1 mm.

</table>

10.10 Standard Effect wheel configuration

![Effect wheel configuration diagram]
10.11 How to replace effects

1. Lift and gently extract from the wheel the support which contains the effect you are going to replace.
2. Slide the new support under the spring, making sure that it enters in place through the two pins on the back of the support.

11. Maintenance

11.1 Periodic cleaning

Lenses and filters
Even a fine layer of dust can reduce the luminous output and alter the compactness of the beam. Regularly clean all filters and lenses using a soft cotton cloth, dampened with a specialist lens cleaning solution.

Fans and air passages
The fans and air passages must be cleaned approximately every 6 weeks; the period for this periodic cleaning will depend, of course, upon the conditions in which the projector is operating. Suitable instruments for performing this type of maintenance are a brush and a common vacuum cleaner or an air compressor.
If necessary do not hesitate to carry this out even after a shorter period of time.

11.2 Periodic maintenance

Lamp
Check the lamp and replace it if there is any observable damage or deformation due to heat (check with the resettable counter).

Mechanical parts
Periodically check all mechanical devices for wear and tear; gears, guides, belts, etc., replacing them if necessary. Check the projector is not mechanically damaged. If necessary, replace the worn parts.
Check the tension of the belts and adjust them if necessary.

Electrical components
Check all electrical components for correct earthing and proper attachment of all connectors. Press the connectors if necessary and reposition as before.

11.3 Fuse replacement

Locate the fuse, which protects the lamp and electronics, in the base of the Infinity Spot S.
Using a multimeter, test the condition of the fuse, replacing it with one of equivalent type if necessary.

12. Spare parts

All the components of the Infinity Spot S are available as replacement spares from your authorised Coemar service centre. Accurate description of the fixture, model number, and type will assist us in providing for your requirements in an efficient and effective manner.

13. Error messages

If you have to check a malfunction, Infinity Spot S has an auto-diagnostic system that visualises in the lower part of the display one or more intermittent messages, preceded by "ERR". The following table will help you to understand these messages correctly. If the problem persists despite carrying out the suggested procedure, contact your Coemar Customer Service Centre.

<table>
<thead>
<tr>
<th>Error message</th>
<th>Description and suggested solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>ERR: PAN</td>
<td>PAN ENCODER Error: This message indicates that there is a problem with the PAN encoders. Check the sensors on the encoder wheel located near the pan movement motor, as well as the relevant cabling.</td>
</tr>
<tr>
<td>ERR: TILT</td>
<td>TILT ENCODER Error: This message indicates that there is a problem with the TILT encoder located on the fixture's yoke. Check the sensors on the encoder wheel located near the tilt movement motor, as well as the relevant cabling.</td>
</tr>
<tr>
<td>ERR: SENSORS LINE #2</td>
<td>Control circuit error relating to position sensors for 4 motors located in the yoke (GOBOS). Check for the presence of power in the pcb and the condition of the connectors and cabling between the pcb and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.</td>
</tr>
<tr>
<td>ERR: SENSORS LINE #3</td>
<td>Control circuit error relating to position sensors for 4 motors located in the yoke (EFFECTS, ZOOM, FOCUS). Check for the presence of power in the pcb and the condition of the connectors and cabling between the pcb and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.</td>
</tr>
<tr>
<td>ERR: SENSORS LINE #5</td>
<td>Control circuit error relating to position sensors for 5 motors located in the yoke (COLOUR WHEEL). Check for the presence of power in the pcb and the condition of the connectors and cabling between the pcb and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.</td>
</tr>
<tr>
<td>ERR: COLOUR WHEEL</td>
