Coemar Introduces Ledko Fixtures at Prolight + Sound

LONDON, UK - At the Prolight+Sound in Frankfurt, Coemar debut their latest product, the Reflection Ledko, a new series of LED profilers. The new series of profilers, to which was applied Reflection technology (patent pending, awarded for innovation at the London Plasa 2010), revolutionises the product

performance while adding important benefits including: - generates a beam of uniform light mixed at source, eliminating the problems of a multiform and multi-shadow light from the LED products

- saves energy such that the purchase of the product pays for itself in just a few months of use, thanks to the cancellation of maintenance costs;
- can project custom gobos, printed instantly with a transparency sheet and your standard printer, thanks to LED light that does not generate heat;
- gives the possibility of renewing current lighting stocks, thanks to the compatibility with the most common profiler accessories in the world.
- allows to act on the modulation of the light without using dimmers and scrollers.

Reflection Ledko is available in three models, Full Spectrum, Reflection Ledko VariWhite 3000/7000 K, White Reflection Ledko 3200 K, with Soft Profile and Profile lenses.
